

Shallow Water... Deep Trouble II - what a difference a decade makes

Thursday 18 October 2018

08:45 - 17:30

Norwich City Football Club, Carrow Road, Norwich NR1 1JE

Registration Fees

£75 for SUT and/or EEEGR members; £125 for non-members
Includes lunch, refreshments and drinks reception

[*Click here to book your place online*](#)

Site investigations in the nearshore and shallow water can present unique challenges, with potentially significant variations in ground conditions, bathymetry and environmental parameters within individual development sites and construction time scales. Investigations may be for a range of purposes – from providing baseline environmental information and site characterisation through to informing engineering decisions and infrastructure siting.

Since the first 'Shallow Water ... Deep Trouble' meeting was held in 2005 in Norwich, there have been major advances in data acquisition technology, analytical techniques, data processing and visualization, that have improved site investigation practice and advanced our understanding of the shallow water zone. This meeting will report on a range of approaches to shallow water site investigation, as well as providing an update on recent methodological advances, that allow for successful site investigations in a challenging environment. The meeting will be of interest to all those working in nearshore and shallow waters – with contributions from industry, academia, contractors and consultants.
